Abstract

In order to clarify the current situation and the problems of the sport coach dispatch business, this study aimed to reveal the experience of Japanese coaches who were dispatched to Bhutanese national football team. Participants were interviewed about the problems that occurred during the preparation before the competition and the competition itself. The finding suggested that before actually coaching, dispatched coaches should gain the information from Japanese Football Association (JFA) or former dispatched coaches about the country that they will take charge of. Moreover, it is important for coaches to gain information about cultures, habits and religion from Japanese who are in that country or international corporation agency. With this information, coaches need to carefully consider the training activities with local coaches to provide the most effective training for their players. Moreover, improving the sport development program such as physical education at school is important to provide the opportunity for young players to learn basic soccer skills from their childhood. In addition, it is important to cooperate with other countries such as making friendly matches to gain player's international experience.
